PRESS RELEASE

November 2021

New SITI B&T spray dryer in the Laminam plant

The Group contributes to the expansion of the plant in Borgo Val di Taro in the Parma Apennines

SITI B&T has won Laminam's trust in doubling its production capacity at the Borgo Val di Taro site: the market leader for large ceramic slabs has chosen SITI B&T Group technology for the **latest generation spray dryer**, which stands out for its maximum productivity, high energy efficiency and the quality of the end product.

The spray dryer is designed for the **recovery of heat** from other users, thus allowing a marked reduction in energy consumption.

Energy efficiency is also achieved thanks to the lower temperature set-point, the optimized diffusion of hot air in the chamber and the burner compatible with a hydrogen blend.

The **spray dried powder cooling system** allows packing of the batches and storage silos downstream of the spray dryer to be prevented, increasing the quality of the finished product that can be obtained during the pressing phase.

SITI B&T's technical solution boasts a **heavily green component**, protecting the particular ecosystem of the Alta Val di Taro, where the Laminam plant is located: the stringent limits on emissions are in fact fully respected thanks to an innovative filtration system and dust recovery.

SITI B&T therefore confirms itself as a complete technological partner, capable of responding to the needs of green technologies with low environmental impact.

SITI-B&T Group, listed on the AIM Italia stock market since March 2016, is a manufacturer of complete plants for the world ceramic industry with a strong presence in all global markets. It delivers outstanding technological solutions and innovative services with a special focus on energy efficiency and respect to the environment. The Group boasts 23 companies, 17 of which are branches abroad in 12 different countries and on 4 continents, each year it invests 4% of its turnover in Research and Development, most of which is carried out in the modern bt-LAB in Formigine, main location of scientific laboratories and the four pilot lines of the different technologies.

It offers customers a complete personalised service including technical assistance with installation, maintenance and modernisation of production lines.

SITI-B&T Group operates through the following business units: Tile (complete plants for tile production), Projecta Engineering and Digital Design (digital decorating machines and digital graphic design projects), Ancora (surface finishing systems for ceramic products), Diatex (cutting and grinding tools), B&T White (complete plants for sanitaryware) and B&T Quartz" (complete lines for agglomerated quartz).
